

welcome to innovation

Your WLO product is crafted with natural, sustainable materials to provide your pet with a safe and comfortable space. Proper assembly and use are essential for durability and safety.

Usage & Safety Tips

- Do not leave the furniture in wet, damp, or outdoor areas for long periods.
- Regularly check and re-tighten any loose screws as needed.
- Do not allow children to play on the furniture.
- Make sure you have chosen the right size and model for your pet.

Why Assembly Matters

Correct assembly ensures maximum strength and longevity of your furniture. Even a small error can affect function or safety. Please review the reminders!

- **Don't Forget the Protective Film on Acrylic Panels!**

Remove all protective films and tapes from acrylic panels before assembly. (30% of users forget this step!)

- **Eco-Composite is Soft Yet Strong; Don't Over-Tighten Screws!**

Stop tightening when screws are flush with the surface. Over-tightening can damage the material. If using a power tool, set torque to 1.

- **Ensure Joints are Fully Seated Before Tightening!**

Make sure all parts and joints fit snugly before tightening screws.

- **Follow Part Numbers!**

Double-check you are using the correct part at each step. Follow the manual carefully.

- **Do Not Leave Your Dog Alone for Long Periods!**

If left alone too long, your dog may become anxious, damage the crate, or injure itself.
